Subject: Deploying GeoProbe to Region 5

Hey Mike and Lorenzo, I've got a question for you guys...

How would you feel about deploying the geoprobe to the Central Sands Wisconsin area?

Lee Thomas who recently transferred to our region was telling Cheryl Burdette about our capabilities and how awesome MESB is, and since Cheryl and I already work together on R5 PhyloChip projects it came up in conversation that she could really use us if we were able to deploy to R5.

R5 does not have a geoprobe team like we do, and is in need of mapping a Nitrate plume that is contaminating the ground water in that area possibly due to the overapplication of nitrates and phosphorus in a specific area.

On top of the geoprobe, she is looking for Isotopic analysis of N15. I don't think that's something we do, or our lab can do but I told her I would mention it to see if it triggered any suggestions.

I told her that IF it was possible for us to deploy up there, that management would most likely request R5 to pay for the travel portion of the deployment. She is looking to find out if we would do it, and what we would need from her so she can request it from her management.

Have geoprobe, will travel?
